

EDUCATION

Bennett University <i>Bachelor of Technology- Computer Science Engineering with AI/ML.; GPA: 8.54</i> SGMS, Delhi & SDVM, Panipat <i>CBSE Board – Class XII: 80%, Class X: 95%</i>	Delhi, India July 2024 -2028 Apr 2021 - Mar 2024
--	---

SKILLS SUMMARY

- Languages:** Python, Java, C/C++, Javascript
- Technical Skills:** DSA, HTML, React.js, Tailwind, MongoDB, Flask, FastAPI, CI/CD Pipelines, Python Libraries, MySQL
- Core Fundamentals:** DBMS, Object-Oriented Programming (OOP), Operating Systems, AI/ML
- Tools:** Google Cloud Platform, AWS, Git, GitHub, Canva

EXPERIENCE

Software Development Engineer Intern <i>Lehar Technologies</i> Backend: Architected 10+ interconnected MES portals with RESTful APIs integrating eWayBill & GABA APIs for automated invoicing, biometric hardware for real-time attendance, 5 QR-code fault-reporting stations, and press analytics dashboard with sensor data optimization cutting load time from 30s to under 6s. Cloud & Data Analytics: Engineered a real-time IoT pipeline via MQTT ingesting live sensor data (temperature, vibration, stroke count) from 14+ press machines built a live monitoring portal with remote machine control, and deployed the full backend on GCP (VMs, Firestore, Firebase) supporting both real-time dashboards and historical trend analysis. Frontend: Developed the Khandelwal Busbar Industries website with a fully self-serve Admin Panel, empowering business owners to independently manage their entire web presence adding products, editing content, uploading media, and restructuring pages without any developer involvement; also engineered the Lehar Technologies company website integrating an interactive Three.js 3D model.	Feb 2026 – Present Remote

PROJECTS

TerraViT – AI-Powered Climate Intelligence System [GitHub]: - Developed an end-to-end climate monitoring system using Vision Transformers (ViT) on geospatial satellite imagery to detect and explain environmental changes. - Built a FastAPI + PyTorch backend for model inference and an interactive Next.js (React, Tailwind) frontend to visualize predictions, temporal changes, and attention-based insights. AI-Powered Multi-Violation Traffic Monitoring System (PyTorch, YOLO, PaddleOCR, OpenCV, Roboflow) [GitHub, Deployed]: - Engineered 4 YOLO-based detection pipelines — helmet violation, illegal parking, driver monitoring, and traffic-signal violations — achieving 85–99.8% mAP@50, with parking-compliance model hitting 99.8% precision / 99.9% recall at 285 FPS on a 1,159-image validation set. - Built an 8-class traffic-violation detector on 6,724 annotated images (90.86% precision / 89.36% recall) and a multi-task driver-monitoring model detecting drowsiness, distraction, and seatbelt violations simultaneously at 92.1% mAP@50, with integrated PaddleOCR for automated license-plate extraction. SafeNet – Disaster Awareness Safety Platform (SIH Project) : - Developed a multi-dashboard web platform to improve disaster awareness and safety for school and college students, with separate portals for students, teachers, parents, and admins. - Built age-specific learning modules, real-time monitoring, and secure authentication using TypeScript, Node.js, MongoDB, and integrated disaster prediction APIs and geospatial data.

HONORS AND CERTIFICATIONS [CERTIFICATE]

- Third position – Project Showcase 2.0, Global AI Summit 2025, for presenting TerraViT, an AI-powered climate intelligence system. - Google - Computer Networks - Google - Operating System - NPTEL -Software Engineering - Infosys - Data Structures and Algorithms	
---	--

POSITION OF RESPONSIBILITY

General Secretary, ACM Research-Based Chapter (New York) <i>Led and coordinated research-focused initiatives, technical events, and team operations within the chapter.</i> Media Head, Uphoria Annual College Fest <i>Bennett University</i> <i>Contributed to content creation, digital promotion, and event visibility through coordinated media and outreach efforts.</i>	2025 - 2026 2025 – 2026
